Tropical Mansoon Climate

Distribution

Some parts of world experience seasonal winds like land and sea breezes but on larger scale.

These are Tropical monsoon lands with on-shore wet monsoons in summer and off-shore dry monsoons in winter.

Best developed in Burma, Thailand, Laos, Cambodia, parts of vietnam and south china.

Climatic Conditions

In summer sun is overhead at the tropic of cancer, the land masses of northern hemisphere heated.

A low pressure is set up in Central asia.

At the same time Southern hemisphere experiences a winter and a region of high pressure created.

Winds blows outwards as the south – east monsoon and after crossing the equator are drawn towards continental low pressure area reaching Indian sub-continent.

Seasons Of Tropical Monsoon Climate

Cool, dry season. (oct to Feb)

Hot dry season. (March to mid june)

Rainy season (mid – june to September)
